1. Course information

DOMINOES addresses the digital transformation that the news media ecosystem is undergoing. It supports the development of the digital capabilities of the higher education sector and contributes to innovation in higher education and vocational training.

The overall objective of the project is to reduce social polarisation by combating fake news and online disinformation among two target groups: university professors employed at the partner universitiesand civil society educators and master students at the three partner universities, respectively.

The course aims to help university professors and master's students, as well as civil society trainers, to acquire advanced digital skills to identify and counter propaganda, fake news and information manipulation that led to social polarisation, extremism and discrimination in society.

The course was developed in collaboration between: "Mihai Viteazul" National Intelligence Academy (MVNIA) - Romania, Ciberimaginario Research Group of Rey Juan CarlosUniversity - Spain, Kentro Meleton Asfaleias (KEMEA), L-Università ta' Malta, and New Strategic Center - Romania.
